Introduction

Welcome to the Space Pod Campers family! This user manual is designed to help you get the most out of your camper. Please read through this manual thoroughly before using your camper to ensure safe and efficient operation.

1. Safety Precautions

- Try to always park on a flat, stable surface before setting up the camper.
- Never leave the camper unattended with gas appliances running.
- Ensure all electrical systems are properly connected and maintained.
- Use the smoke alarm test button regularly to ensure it is functioning correctly.
- When using the drop-down table and awning, ensure they are securely fastened.

---

2. Setup & Installation

Unpacking & Inspection

1. Upon receiving your Space Pod Camper, carefully unpack and inspect it for any damage or missing components.
2. Check the exterior and interior for any scratches, dents, or other issues.
3. Report any damage to Space Pod Campers within 48 hours of delivery.

Leveling the Camper

1. Position the camper on a flat surface.
2. Use the rear stabilizers with wind-down legs and the jockey wheel to stabilize and level the camper.
3. Adjust the drawbar leveler to ensure the camper is perfectly level.

Connecting Power Systems

1. Ensure the 12v isolation switch is “On” so you can have 12v power to the camper.
2. If using a 240V power input, connect the optional 240V lead to a 15A suitable power source (Powers kitchen and optional cabin power point only).
3. Attach the Anderson plug to your vehicle for additional DC/DC charging.

Water System Setup

1. Fill the 59-liter water tank with clean drinking water.
2. Ensure the water pump is connected and functional.
3. Test the water system by turning on the tap and checking for consistent water flow.

---

3. Interior Features & Usage

Sleeping Area

- Place the 100mm foam double mattress in the designated sleeping area.
- If for any reason you need to remove the mattress, it’s best to fold it and pull it through the door.

Lighting & Power Management

- The dimmable reading lights are located on each side of the bed. Use the switches to adjust brightness as needed.
- USB ports for charging devices are located under the overhead cupboard on these lights too.
- Monitor the battery voltage using the USB port with a power battery monitor in the rear storage cupboard.
- Using the 12v Wireless Switch Controller you can control your whole camper and turn on and off the power. If your controller dies, and you have no means of charging it. There is a USB in the toolbox to reboot your system, as the camper power will drop if the controller does.
- The battery has a BMS you can download on both Apple and Android app stores called “KA Power Comms’. The logo is a KA with a lightning strike in the middle. This will give you vital information on your battery and its current charge, charging state and individual cell information.

Ventilation & Comfort

- Open the windows and doors for ventilation. Each door is lockable and consists of two parts: a Crimsafe mesh for ventilation and security, and a smoked screen for privacy.
- Adjust the 5-speed internal fan to circulate air. Optional Sirocco fans can be added for additional ventilation.

Storage Solutions

- Utilize the overhead cupboards, large cabin cupboards and sidewall elastic pockets for storing small items like documents, phones, or keys.

---

4. Exterior Features & Usage

Awning Setup & Usage

1. If you've opted for the awning, begin by unfolding it from the storage rack.
2. Secure the awning arms and ensure they are properly tensioned.
3. Attach side walls (if purchased) for additional privacy and weather protection.

Stabilizers & Drawbar Leveler

- Adjust the rear stabilizers with wind-down legs and jockey wheel to ensure the camper remains stable.
- Use the drawbar leveler to fine-tune the leveling of the camper when parked.

External Power & Utilities

- External USB and cigarette plug outlets are located under the awning for powering lights, charging devices or powering small appliances.
- The lockable drop-down table can be used for meal preparation. Ensure it is securely fastened before placing any items on it and locked when traveling.

---

5. Electrical & Utility Systems

Battery Maintenance

- Regularly check the 100Ah lithium battery for charge levels and health.
- Turn off your battery system on the battery to avoid draining it when not in use.
- Avoid fully discharging the battery to prolong its life.

Solar Panel Usage

- The 160W solar panel will maintain your battery charge. Ensure it is exposed to direct sunlight for optimal performance.
- Clean the solar panel periodically to remove dust and debris.

Anderson Plug Connection

- Use the Anderson plug to connect to your vehicle for auxiliary charging.
- Ensure all connections are secure to prevent short circuits or power loss.

Water System Operation

- The water system is powered by a pump connected to the 59-liter tank.
- Test the system by running water through the tap. If the flow is inconsistent, check the pump and tank connections or air in the line.

Refrigerator Operation

- The 30-liter compressor fridge is designed to keep your food and beverages cold. Ensure it is powered via the 12v battery system or 240v using the supplied cable.
- Adjust the temperature settings as needed for your trip either freezer or fridge.
- User Manual comes with the fridge if you have further questions.

---

6. Optional Add-Ons

Sirocco Fan

- Using the adjustment lever you can lift and lower the fan. You can rotate the fan to target the desired area.
- Clicking the power button cycles 3 power modes: Low, Medium and High before powering off. The other button is a timer each light that appears is equivalent to 3 hours, meaning 3, 6, 9 or 12 hours off settings.
- If you've opted for the Sirocco fan, refer to the instructions provided with the camper for any more questions.

Setting Up the Instant Shower Room

- The instant shower room from Darche can be attached to the side of the camper. Ensure it is securely fastened and that the water system is connected.

Using the Side Walls for Awnings

- Attach the side walls to the awning for added privacy and protection from the elements. Ensure all attachments are secure.

Cabin 240v Power Point

- If using a 240V power input, connect the optional 240V lead to a 15A suitable power source (Powers kitchen and optional cabin power point only).

---

7. Aesthetic & Branding Care

Cleaning & Maintenance

- Clean the exterior aluminum composite panels with a mild detergent and water. Avoid abrasive cleaners that could damage the finish.
- The internal laminate surfaces can be cleaned with a damp cloth and mild soap.

Sticker & Artwork Care

- Avoid high-pressure washing directly over stickers and artwork to prevent peeling.
- If stickers become damaged, contact Space Pod Campers for replacements.

---

8. Troubleshooting

- No Power: Check battery connections, charge level, and solar panel connections.
- Water System Not Working: Verify pump operation, check for clogs, and ensure the tank is full.
- Fridge Not Cooling: Confirm that the fridge is properly connected to power and that the temperature settings are correct. Refer to the fridge manual for more in depth troubleshooting.

For further troubleshooting, consult our support team.

---

9. Maintenance & Storage

- Regularly inspect and clean the camper, especially after off-road trips.
- Store the camper in a dry, covered area if possible when not in use to protect it from the elements. Ideally protected using a camper cover, or in the garage or carport.
- In storage ensure a decent amount of ventilation to prevent the chance of condensation and molding.
- Periodically check wheel nuts, seals, screws, and all mechanical components for wear and tear.

---

10. Support & Warranty

- If you can’t find an answer in this manual, you can refer to (Part 12. Community Engagement) and ask our friendly community or contact us directly.
- Refer to our Warranty and Claims document for more information.
- For any issues or queries, contact our support team or visit our website.

---
